

**A 10 VARIO**

**A7 VOR**

**A12 VARIO**

**VARIO** log splitters can work in several positions making them very effective, maximising productivity. They feature twin speed controls that optimise performance and 12-ton models have a twin speed pump as standard. The newly designed inclined wedge has increased performance by 30%, making it easier to penetrate harder species of wood. Non-slip aluminium inserts on the base of the log splitter allow you to work precisely without having to reposition the log when splitting.
